Education

University of California, Berkeley - B.A. Computer Science **Aug 2016 - May 2020**

Selected Coursework: **Database Systems, Computer Security**, **Natural Language Processing**, **Privacy Engineering,** Operating Systems, Machine Learning, Artificial Intelligence, Data Structures, Algorithms, Advanced Probability Theory, Computer Graphics, Discrete Math, Internet Architecture

Awards, Recognitions: Top final project in Advanced Probability Theory and Random Processes (EECS 126)

Work Experience

Atlassian **San Francisco, CA**
Data Engineering Intern **May 2019 - Aug 2019**

- Configured a daily Airflow job to ingest Google Ads data required to support performance marketing teams
- Automated and decreased latency of an n-gram analysis of large datasets of domain-specific content while working closely with the data science team (**NumPy, sklearn, Spark ML Lib**)
- Built a full stack microservice for external contractors to track customer acquisition channels

UC Berkeley **Berkeley, CA**
Undergraduate Researcher **Jan 2018 - Sept 2018**

- Worked on parsing metrics from Facebook profiles curated from a experimental pages with paid advertisements to detect fake activity and to build a social network graph
- Trained a regression and random-forest model to predict if a particular user is fake

Microsoft **Greater Seattle Area, WA**
Software Engineering Intern **May 2018 - August 2018**

- Full stack development for Azure DevOps (Typescript, C#, **React**, **Redux**) in Agile work environment

Projects

Secure File Share System **February *2019***

- Built a secure file sharing system, similar to Dropbox (only command line interface), using **GoLang**
- Implemented **secure authentication, fast file system, file sharing** that is impervious to MITM attacks and eavesdroppers

Stock Predictor (Top project in UC Berkeley EECS 126) **November *2018***

- Wrote out a Python notebook and library to predict future stock prices for instruments traded in any sector on NASDAQ, given sufficient data points
- Built feature extraction module for single stock time series using Quandl, Pandas, and Technical Analysis libraries. Ran regression models as well as random forest, HMM, and SVM models using Scikit-learn.

Skills

Java, Python, C, NumPy, Scikit-learn, Pandas, R, RStudio, Git, JavaScript, TypeScript, React, Flask, SQL
